

# Running the Book Database Applications

## Update the database file to the new version of Visual Studio

1. Download the data base file books.mdf
2. Download the demo file and unzip it.
3. Open the demo solution file
4. In the solution explorer, right click the project **JoinQueries**
5. Select Add → Existing item.  
Find and select the database books.mdf

6. Connect to SQL Express database
  - a. Select View → Server Explorer

1. Select the connect to database button (cylinder icon)
2. In the Add Connection dialog box, specify the following information:

**Add Connection** ? X

Enter information to connect to the selected data source or click "Change" to choose a different data source and/or provider.

**Data source:**  
Microsoft SQL Server (SqlClient) Change...

**Server name:**  
(localdb)\MSSQLLocalDB Refresh

**Log on to the server**

**Authentication:** Windows Authentication

User name:

Password:

☐ Save my password

**Connect to a database**

☐ Select or enter a database name:

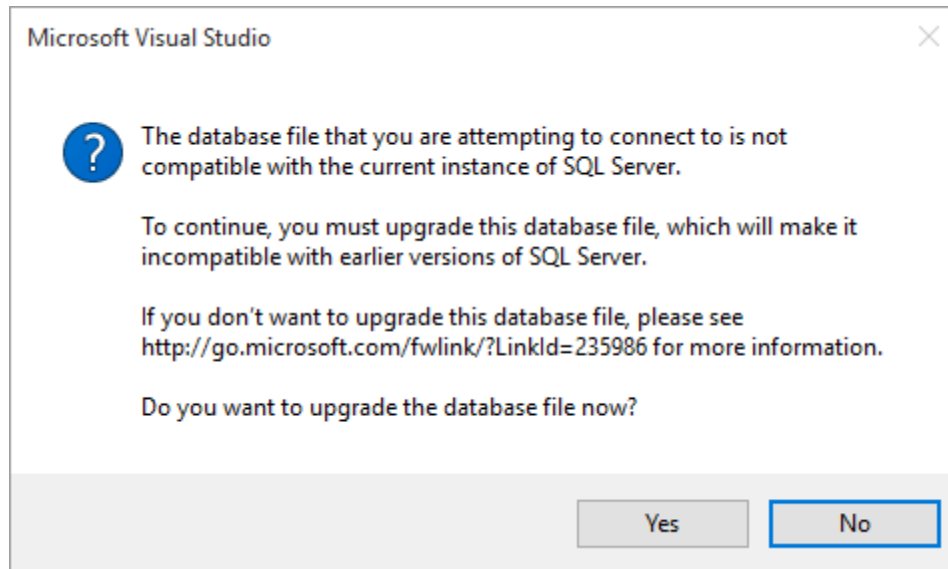

☒ Attach a database file:  
C:\cecs475sp17\BooksExamples\JoinQueries\Books.mdf Browse...

Logical name:

Advanced...

Test Connection OK Cancel

Click OK.

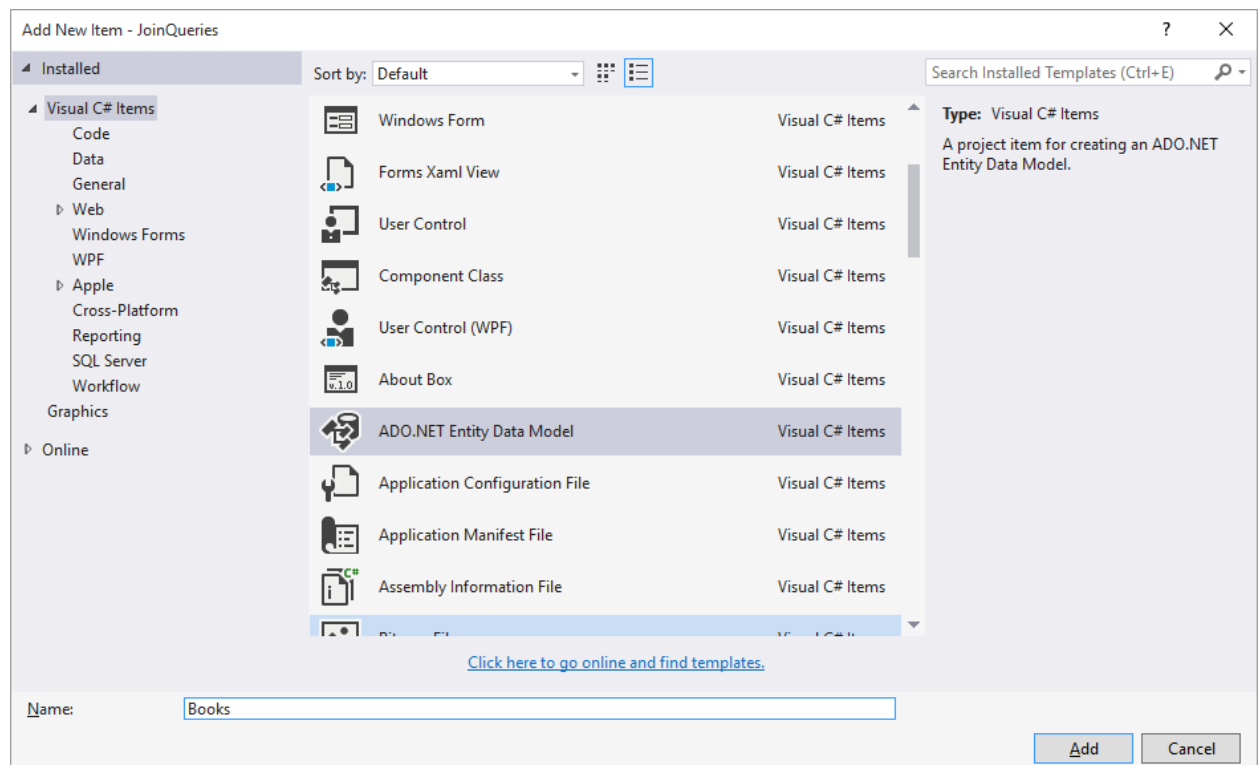

Click Yes to upgrade the database file.

## Create ADO Entity Data Model

1. In the solution explorer, right click the project **JoinQueries**

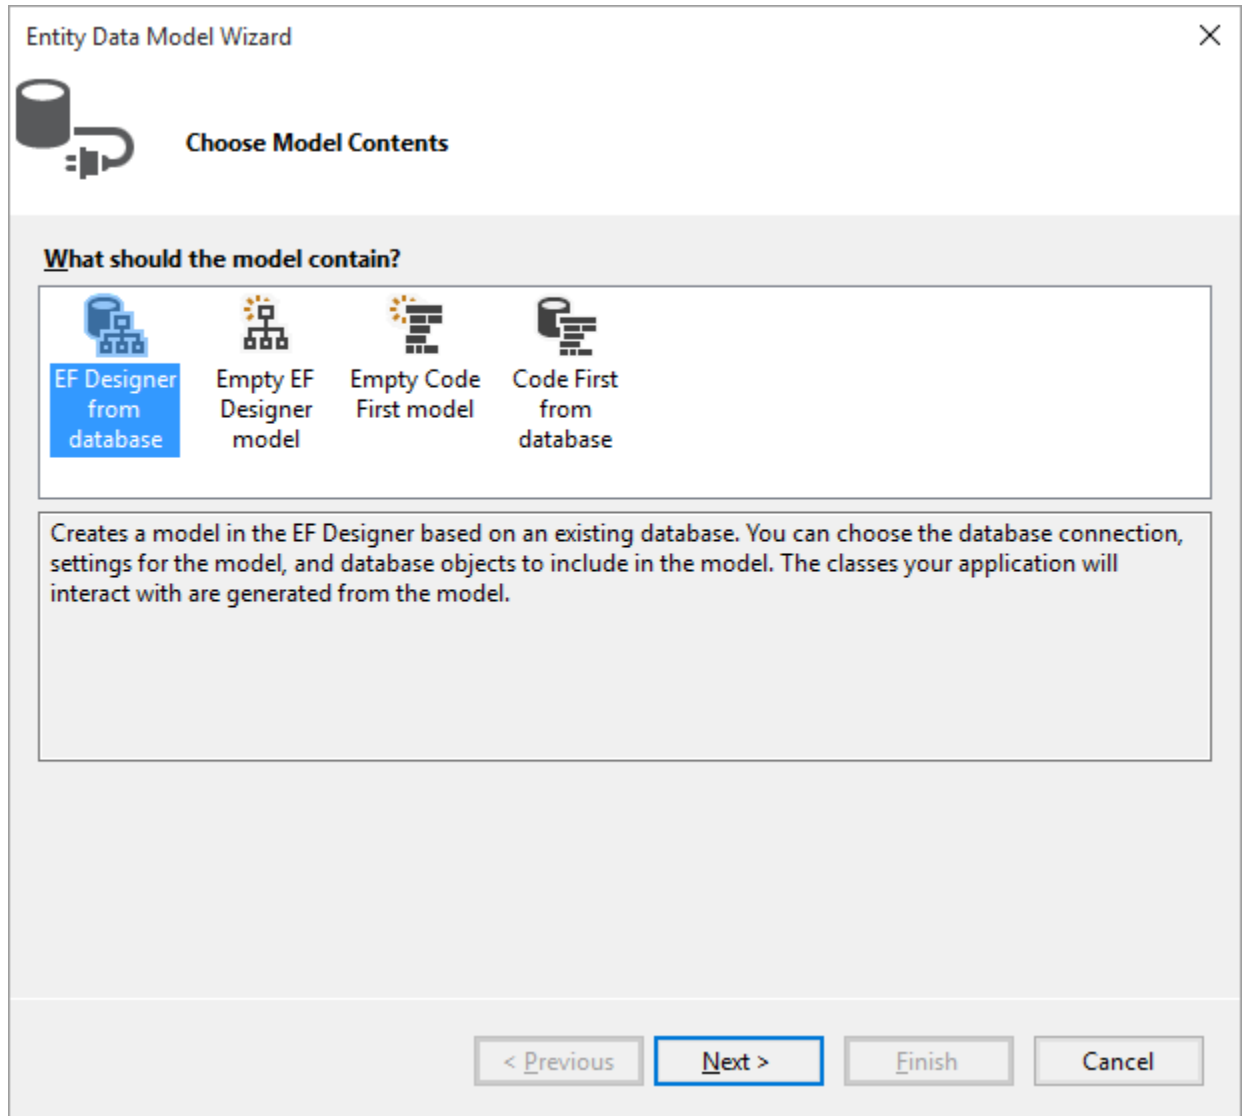

Select Add → New item.

In the Add New Item dialog box, specify the following information:

Click Add.

2. In the Entity Data Model Wizard, select EF Designer from database, click Next.

Entity Data Model Wizard

✕

 **Choose Your Data Connection**

**Which data connection should your application use to connect to the database?**

Books.mdf

▼

New Connection...

This connection string appears to contain sensitive data (for example, a password) that is required to connect to the database. Storing sensitive data in the connection string can be a security risk. Do you want to include this sensitive data in the connection string?

☐ No, exclude sensitive data from the connection string. I will set it in my application code.

☐ Yes, include the sensitive data in the connection string.

Connection string:

```
metadata=res://*/Books.csdl|res://*/Books.ssdl|
res://*/Books.msl;provider=System.Data.SqlClient;provider connection string="data source=
(localdb)\MSSQLLocalDB;attachdbfilename=|DataDirectory|\Books.mdf;integrated
security=True;MultipleActiveResultSets=True;App=EntityFramework"
```

☒ **S**ave connection settings in App.Config as:

BooksEntities
